Introduction

When it comes to education, resource management is the work that allows the schools to organize the resources they need or have and to make appropriate decisions about such resources. Educational resources are the resources which are freely accessible, openly licensed text, media and other digital assets which is used for acquiring knowledge, teaching, sharing your knowledge. If it's something which supports the education. Schools and colleges are formal organization setup for the purpose of educating, the youngsters. Resources in education refers to all of those assets- contingency, equipment, instructional materials, finance etc.,

Imbalance Between the Students Syllabus:

Changing and challenging economic times are creating a fiscal environment in states, districts and schools across the country. The resources may vary from school to school yet forming an unequal balance in performance. Think of it a public school will never match the private school's syllabus. There is major fault in these two syllabus encouraging the rift between these two categories. Due to these difference in the syllabus the private schools get a chance for the advanced use of resources whereas the public school will struggle to get the recognition.

Even though the students were talented and knowledgeable as others it takes a pinch of innovation and a massive flow of resources. The high paid schools which were well equipped in all ways from the projected classroom to the neat infrastructure but in the public schools though it have the qualified teachers the amount of ignorance in using the avail resources causes the limp in the global competition.
